### Diagramme de classe : Plot Window

### Fonctionnement affichage :

Plot\_window

- $\rightarrow$  Plot\_tab
- → Plot frame
- → Plot\_layer
- → Plottable

## Focus sur la classe : Plottable

Choix de conception : omniprésence du polymorphisme

```
cnc .. Plottable
+ bool illustrative
# std::string x label
# std::string y label
# OColor plot color
# range x range
# range v range
# Plottable * range reference
# plot axis policy pap
- static constexpr int AXIS DISTANCE BETWEEN
- static constexpr int AXIS SIZE BAR
- static constexpr int AXIS PRINT NB EVERY
+ virtual void change label(axis axis id, const std::string &str)
+ virtual ~Plottable()
+ void set color(const QColor &qc)
+ void set_range_reference(Plottable *p)
+ void set axis policy(plot axis policy p)
+ void fix plot range(const range &rx, const range &ry)
+ void fix plot in rect(float x, float y, float w, float h=-1.f)
+ range get x range() const
+ range get y range() const
+ virtual plot_type get_type() const =0
# virtual void init stat display(Plot frame *, Plot layer *, QVBoxLayout *, const Stat list &) const
# void draw axis(frame draw object &, const std::pair< range, range > &ranges) const
# virtual void init()
# virtual void call draw axis(frame draw object &) const =0
# virtual void plot(frame draw object &)=0
# virtual void compute values (const frame info &fi)=0
# virtual void compute value range(const frame info &fi)=0
```

# Focus sur un plot : Function\_plot

# Focus sur un module de calcul scientifique : Résolution d'équa diff EDO et EDP

ODE solving: comparing numerical schemes

Euler Explicit: Order 1 RK2: Order 2 RK4: Order 4  $\Delta t = 0.3$ 

#### Typedefs

typedef std::vector< std::pair< vec, float > > ODE\_steps

ODE\_steps type containing all the steps computed during **ODE** solving. More...

typedef std::function < vec(const vec &, float) > differential

differential derivative (here f) in the associated cauchy problem u'(t) = f(u(t),t) More...

typedef std::function < vec(const vec &, float) > ODE scheme

ODE\_scheme numerical scheme to solve the **ODE**, must give u\_{n+1} given u\_n and t.

#### Functions

std::vector< vec > extract space steps (const ODE steps &S)

extract space steps remove time information from an ODE steps to only keep position (usually for plotting^) More.

ODE scheme build euler explicit (const differential &f, float dt)

build euler explicit build the ODE scheme associated with the euler explicit method (order 1) More...

ODE scheme build runge kutta 2 (const differential &f, float dt)

build runge kutta 2 build the ODE scheme associated with the runge kutta 2 method (order 2) More...

ODE\_scheme build\_runge\_kutta\_4 (const differential &f, float dt)

build\_runge\_kutta\_4 build the ODE\_scheme associated with the runge kutta 4 method (order 4) More...

ODE\_steps solve\_ODE (const ODE\_scheme &s, const vec &x0, float t0, float dt, uint N)
solve\_ODE computes the approximation of the solution of the ODE, given a scheme, a starting point and time, time

Omniprésence de la programmation fonctionnelle

# Focus sur une feature en WIP : C&C GUI

 Pour l'instant : parsing de fichiers csv pour affichage et analyse de nuages de points

Welcome to the Curves&Clouds G	rUI!

# Conclusion et avenir

- On prévoit de continuer le développement, au moins pour un usage personnel
- Cahier des charges rempli! (on avait été raisonnable...)
- Projet riche du début jusqu'à la fin pour des raison évoluantes : d'abord réflexion globale sur la structure puis réflexion locale sur l'implémentation de maths
- Ce qu'on ajoutera :
  - Choix du typage (précision des calculs)
  - Développement de l'application GUI
  - Toujours plus de maths!
